the general understanding of design is that it should lead to a manufacturable product neither the design nor the process of manufacturing is perfect as a result the product will be faulty will require testing and fixing where does economics enter this scenario consider the cost of testing and fixing the product if a manufactured product is grossly faulty or too many of the products are faulty the cost of testing and fixing will be high suppose we do not like that we then ask what is the cause of the faulty product there must be something wrong in the manufacturing process we trace this cause and fix it suppose we fix all possible causes and have no defective products we would have eliminated the need for testing unfortunately things are not so perfect there is a cost involved with finding and eliminating the causes of faults we thus have two costs the cost of testing and fixing we will call it cost 1 and the cost of finding and eliminating causes of faults call it cost 2 both costs in some way are included in the overall cost of the product if we try to eliminate cost 1 cost 2 goes up and vice versa an economic system of production will minimize the overall cost of the product economics of electronic design manufacture and test is a collection of research contributions derived from the second workshop on economics of design manufacture and test written for inclusion in this book

Is economics a science? What distinguishes it from other sciences, both natural and social? Like many of the natural sciences, its theories are mathematically complex, yet like the social sciences, its laws are largely everyday generalizations. Can such generalizations, which are far from universal truths, constitute a science? Does economics have a distinctive method? The first edition answered these and other questions about the scientific status of economics and its underlying methodology. In this fully updated new edition, Dan Hausman reflects on developments in both economics and the philosophy of economics over the last thirty years. It includes a new chapter on the methodology of macroeconomics, an updated discussion on the use of models, and new discussions on causal inference and behavioural economics and their implications for theory appraisal. It is the perfect choice for a new generation of students studying the methodology of modern economics.
