how did life evolve on earth the answer to this question can help us understand our past and prepare for our future although evolution provides credible and reliable answers polls show that many people turn away from science seeking other explanations with which they are more comfortable in the book science evolution and creationism a group of experts assembled by the national academy of sciences and the institute of medicine explain the fundamental methods of science document the overwhelming evidence in support of biological evolution and evaluate the alternative perspectives offered by advocates of various kinds of creationism including intelligent design the book explores the many fascinating inquiries being pursued that put the science of evolution to work in preventing and treating human disease developing new agricultural products and fostering industrial innovations the book also presents the scientific and legal reasons for not teaching creationist ideas in public school science classes mindful of school board battles and recent court decisions science evolution and creationism shows that science and religion should be viewed as different ways of understanding the world rather than as frameworks that are in conflict with each other and that the evidence for evolution can be fully compatible with religious faith for educators students teachers community leaders legislators policy makers and parents who seek to understand the basis of evolutionary science this publication will be an essential resource

this edition of evolution the history of an idea is augmented by the most recent contributions to the history and study of evolutionary theory it includes an updated bibliography that offers an unparalleled guide to further reading as in the original edition bowler s evenhanded approach not only clarifies the history of his controversial subject but also adds significantly to our understanding of contemporary debates over it the idea of evolution continued to evolve back cover

based on a comprehensive review of human and societal evolution the book develops an approach to conscious self guided evolution in the course of the evolutionary journey of our species there have been three seminal events the first happened some seven million yeas ago when our humanoid ancestors entered on the evolutionary scene their journey toward the second crucial event lasted over six million years when as the greatest event of our evolutionary history homo sapiens sapiens started the revolutionary process of cultural evolution today we have arrived at the threshold of the third major event the revolution of conscious evolution when it becomes our responsibility to enter into the evolutionary design space and guide the evolutionary journey of our species the book tells the story of the first six million years of the journey in just enough detail to understand how evolution had worked

in times when it was primarily biological driven by natural selection with the human revolution some fifty thousand years ago with the emergence of self reflective consciousness the evolutionary process transformed from biological into cultural from this point on the book follows the journey with detailed attention in order to learn how cultural evolution works the book is organized in three parts part one commences with an exposition of a brief history of the evolutionary idea through time with a focus on a review of the science of general evolution and specifically social and societal evolution next the book unfolds the evolutionary story of our species from the time when the first humanoids entered the evolutionary scene to our current era part two develops a systems view of evolution explores the ways and means of how evolution works characterizes evolutionary consciousness and develops the idea of conscious evolution part three builds upon the knowledge developed in the first two parts and sets forth the key conditions of conscious self guided evolution elaborating the core condition which is the acquisition of evolutionary competence through evolutionary learning the focus of this part is on an approach to the design of evolutionary guidance systems that our families neighborhoods communities organizations social and societal systems can use to design the future they aspire to attain the work is set aside from other statements in three important ways it provides 1 a comprehensive review of how evolution has worked with a focus on socio cultural evolution 2 an explanation of evolutionary consciousness and the conditions of engaging in conscious evolution and 3 most significantly it develops a detailed approach and a methodology to the design of evolutionary guidance systems

this wide ranging handbook studies and defines the paradigm of evolutionary economic geography the distinguished contributors highlight the key conceptual theoretical and empirical advances and present a clear statement of their aims objectives and methods

evolution games and god explores how cooperation and altruism alongside mutation and natural selection play a critical role in evolution from microbes to human societies inheriting a tendency to cooperate and self sacrifice on behalf of others may be as beneficial to a population s survival as the self preserving instincts of individuals

the sandwalk adventures is the tale of follicle mites living in the left eyebrow of charles darwin himself the mites believe darwin is a god one of their myths handed down from generation to generation and he has to set them straight about that and other mite fables a humorous series of illustrated lessons in natural selection and evolution ensues recommended for readers with an interest in real science and a working funny bone 159 pages of evolution humor and science suitable for high schoolers and other intelligent readers

capturing a scientific change in thinking about personality and individual differences that has been building over the past 15 years this volume stands at an important moment in the development of psychology as a discipline rather than viewing individual differences as merely the raw material upon which selection operates the contributing authors provide theories and empirical evidence which suggest that personality and individual differences are central to evolved psychological mechanisms and behavioral functioning the book draws theoretical inspiration from life history theory evolutionary genetics molecular genetics developmental psychology personality psychology and evolutionary psychology while utilizing the theories of the best and the brightest international scientists working on this cutting edge paradigm shift in the first of three sections the authors analyze personality and the adaptive landscape here the authors offer a novel conceptual framework for examining personality assessment adaptations because individuals in a social environment have momentous consequences for creating and solving adaptive problems humans have evolved difference detecting mechanisms designed to make crucial social decisions such as mate selection friend selection kin investment coalition formation and hierarchy negotiation in the second section the authors examine developmental and life history theoretical perspectives to explore the origins and development of personality over the lifespan the third section focuses on the relatively new field of evolutionary genetics and explores which of the major evolutionary forces such as balancing selection mutation co evolutionary arms races and drift are responsible for the origins of personality and individual differences existing as a seminal work in the newly emerging evolutionary psychology field this book is a must read for anyone invested in the development of psychology as a field

this book examines evolution being handled in anthropology from the mid nineteenth century to the present

nietzsche's vision of the overman continues to haunt the postmodern imagination his call that man is something that must be overcome can no longer be seen as simple rhetoric our experiences of the hybrid realities of artificial life have made the transhuman a figure that looks over us all inspired by this vision keith ansell pearson sets out to examine if evolution is out of control and machines are taking over in a series of six fascinating perspectives he links nietzsche's thought with the issues at stake in contemporary conceptions of evolution from the biological to the technological viroid life perspectives on nietzsche and the transhuman condition considers the hybrid inhuman character of our future with the aid of nietzsche's philosophy keith ansell pearson contrasts nietzsche and darwin before introducing the more recent figures such as giles deleuze and guy debord to sketch a new thinking of technics and machines and stress the ambiguous character of our machine enslavement

modularity in development and evolution offers the first sustained exploration of modules from developmental and evolutionary perspectives contributors discuss what modularity is how it can be identified and modeled how it originated and evolved and its biological significance covering modules at levels ranging from genes to colonies the book focuses on their roles not just in structures but also in processes such as gene regulation among many exciting findings the contributors demonstrate how modules can highlight key constraints on evolutionary processes a timely synthesis of a crucial topic modularity in development and evolution shows the invaluable insights modules can give into both developmental complexities and their evolutionary origins

the last decade has seen an explosive burst of new information about human origins and our evolutionary status with respect to other species we have long been considered unique as upright bipedal creatures endowed with language the ability to use tools to think and introspect we now know that other creatures may be more or less capable of similar behaviour and that these human capacities in many cases have long evolutionary trajectories our information about such matters comes from a diverse variety of disciplines including experimental and neuropsychology primatology ethology archaeology palaeontology comparative linguistics and molecular biology it is the interdisciplinary nature of the newly emerging information which bears upon one of the profoundest scientific human questions our origin and place in the animal kingdom whether unique or otherwise which makes the general topic so fascinating to layperson student and expert alike the book attempts to integrate across a wide range of disciplines an evolutionary view of human psychology with particular reference to language praxis and aesthetics a chapter on evolution from the appearance of life to the earliest mammals is followed by one which examines the appearance of primates hominids and the advent of bipedalism there follows a more detailed account of the various species of homo the morphology and origin of modern h sapiens sapiens as seen from the archaeological palaeontological and molecular biological perspectives the origins of art and an aesthetic sense in the acheulian and mousterian through to the upper palaeolithic are seen in the context of the psychology of art two chapters on language address its nature and realization centrally and peripherally the prehistory and

neuropsychology of speech and evidence for speech and or language in our hominid ancestors a chapter on tool use and praxis examines such behaviour in other species primate and non primate the neurology of praxis and its possible relation to language encephalization and the growth of the brain phylogenetically and ontogenetically and its relationship to intellectual capacity leads on finally to a consideration of intelligence social intelligence consciousness and self awareness a final chapter reviews the issues covered the book of around 70 000 words of text includes over 500 references over half of which date from 1994 or later

this book brings out the central role of evolutionary genetics in all aspects of its connection to evolutionary biology

biology was forged into a single coherent science only within living memory in this volume the thinkers responsible for the modern synthesis of evolutionary biology and genetics come together to analyze that remarkable event in a new preface ernst mayr calls attention to the fact that scientists in different biological disciplines varied considerably in their degree of acceptance of darwin s theories mayr shows us that these differences were played out in four separate periods 1859 to 1899 1900 to 1915 1916 to 1936 and 1937 to 1947 he thus enables us to understand fully why the synthesis was necessary and why darwin s original theory that evolutionary change is due to the combination of variation and selection is as solid at the end of the twentieth century as it was in 1859

a riveting explanation of epigenetics offering startling insights into our inheritable traits in the 1700s jean baptiste lamarck first described epigenetics to explain the inheritance of acquired characteristics however his theory was supplanted in the 1800s by darwin s theory of evolution by natural selection through heritable genetic mutations but natural selection could not adequately explain how rapidly species re diversified and repopulated after mass extinctions now advances in the study of dna and rna have resurrected epigenetics which can create radical physical and physiological changes in subsequent generations by the simple addition of a single small molecule thus passing along a propensity for molecules to attach in the same places in the next generation epigenetics is a complex process but paleontologist and astrobiologist peter ward breaks it down for general readers using the epigenetic paradigm to reexamine how the history of our species from deep time to the outbreak of the black plague and into the present has left its mark on our physiology behavior and intelligence most alarming are chapters about epigenetic changes we are undergoing now triggered by toxins environmental pollutants famine poor nutrition and overexposure to violence lamarck s revenge is an eye opening and provocative exploration of how traits are inherited and how outside influences drive what we pass along to our progeny
